Email
Sales@pcworksplus.com
with your referral

Thanks for the referrals!

A New Year Means New Business Strategies.

You have seen the headlines... Yahoo is hacked and seen as the largest security breach in history. Not a good year for Yahoo. According to a report by the Identity Theft Resource Center (ITRC) and CyberScout, the data breaches reported in 2016 were 40% higher from the previous year. Click [here](#) to see information about projected 2017 security.

We at PC Works Plus know that sometimes this is not top of mind for some of our customers, but we are dedicated to doing the best we can to make sure our customers are secure. Sometimes these are not the easiest solutions to implement, because it can mean a change in the way you do business. Security is not convenient or inexpensive, and we feel your pain.

PC Works Plus is dedicating this new year to security awareness. We have started the process by acquiring our Comptia Security Trustmark +.

This compliance provides certifications to key industry regulations such as PCI-DSS, SSAE-16, HIPAA, and others reliant on the NIST Framework. ISO, the International Organization for Standards, also currently maps into the NIST Cybersecurity Framework.

Our certification is scheduled to be completed by October of 2017 and PC Works Plus could be the **first MSP** in the state of PA with this certification, because as of this month, there are no others in PA.

What does this mean to you? You can trust that PC Works Plus is using the industry's standards to safeguard your information and networks internally. This will also bring more expertise to you by helping to implement the standards and securities needed in your industry.

If you have questions on any of the above items certification, please give us a call 814-742-9750 or email us at help@pcworksplus.com with your questions or concerns.

OpenDNS Reporting. See how it is working for you.

OpenDNS Umbrella is an additional layer of protection against Malware, Spyware and Viruses.

Most of our clients now have this extra layer of security installed and working behind the scenes to protect their business. If you have this protection, you can now see how it is working for you.

If you would like PC Works Plus to set you up with reporting to see what OpenDNS is doing for your network, please email help@pcworksplus.com. Reports give insight into the logs of data on DNS look ups. See domains that were blocked, because of threats, and see other stats on websites that were accessed.

Still Interested in adding OpenDNS to your network for another layer of protection?
Email sales@pcworksplus.com and ask for a quote today.

Transform your Business with Office 365 Outlook Groups

Groups is a feature of Office 365 Outlook that provides a shared workspace for collaboration and sharing. The workspace comes with a shared inbox, calendar, document library, OneNote notebook, and planning tool. This is a great tool for collaboration on projects or keeping information in one spot for your meetings. Please note: Office 365 Group is different from a contact group (formerly called a distribution list).

To learn more about Groups, click [here](#) to learn what Office 365 Groups can do for your organization.

If you would like to hear how PC Works Plus uses Groups and would like a free trial of Office 365 Training, email Terra Wertz at twertz@pcworksplus.com for more information.
