

Address

Resolve the risk exposure by remediating and maintaining the uncovered risks.

Most companies are subject to one or multiple regulatory compliance standards whether it be HIPAA, PCI, GLBA, FINRA or others. By requirement or voluntarily, they are also implementing best practices such as NIST or ISO 27001 in order to protect their business and follow a guideline for a security baseline. In addition to industry compliances, 47 out of the 50 states have stringent personal identifiable information (PII) laws, which carry hefty fines for data breaches.

WE BELIEVE THAT ALL COMPANIES BENEFIT FROM A SECURITY FRAMEWORK REGARDLESS OF THEIR COMPLIANCE REQUIREMENTS.

PC Works Plus provides a solid cyber risk management framework that assesses your entire business and provides a transparent window into high value assets and high risk security gaps. This allows you stay organized and create a business and technology roadmap that will improve your security posture and allow you to keep up with the constant changes year after year.

Having access to on-hand reporting and proof of compliance is the key to minimizing your cyber security risk and avoiding costly fines. PC Works Plus will provide you with the tools to meet your compliance standards!

- Advanced Patch Management
- Awareness Training
- Control Framework & Policy Creation
- Password Management
- Encryption Management
- Secure Cloud Access
- Mobile Device Management
- Firewall Management
- Project Management for server and workstation upgrades
- MS O365 Migrations for email and data compliance
- Phone system upgrades to compliant platforms

Contact our team to find out how to remediate to keep your company compliant.
